

Server Hosting — Monthly Cost

Amazon Web Services · Asia Pacific (Sydney) · prepared October 2026. All figures in Indian Rupees at approximately 90 INR to the US Dollar.

What is being paid for

A dedicated cloud server running continuously, 24 hours a day. It holds the application database, the order and payment system, the photo storage and the administration interface. It stays switched on so a customer can place an order at any hour.

What it costs each month

Item	What it is	Per month
Server, 744 hours	The computer itself, on for every hour of the month	INR 977
Fixed internet address	The permanent address the apps connect to	INR 335
Disk storage, 29 GB	Database, application files, system	INR 250
Photo storage	Menu and product images	INR 1
Data transfer	Images and data sent to customers' phones	INR 20
TOTAL		INR 1,583

This server is shared

The same server runs two separate applications for two separate businesses. Rather than renting a server each, the cost is divided between them, so each pays about half.

Full server cost INR 1,583 per month	Divided between 2 businesses one shared server	Your share INR 1,000 per month, fixed
---	---	--

The cost does not increase as the business grows

This is a rental, charged by the hour the server is switched on — not per customer and not per order. A month has 744 hours and the server is on for all of them, whether ten people use the app or two thousand. That is why over 99 percent of the figure above is fixed.

The only part that responds to customer numbers is data transfer, and at a realistic scale it stays very small:

Active customers	Data transfer cost	Total per month, your share
50 per day (today)	INR 5	INR 1,000
200 per day	INR 20	INR 1,000
1,000 per day	INR 500	INR 1,250

Two-year view

Period	Your share, per month	Period total
Introductory period (no charge)	INR 0	INR 0
Year 1 after it begins	INR 1,000	INR 12,000
Year 2	INR 1,000	INR 12,000
Two years from the start of billing		INR 24,000

Billing begins on: _____ (the date the introductory period ends). Until then there is nothing to pay.

What would change this figure

Nothing changes on its own — the figure is flat month after month. It moves only if the business asks for something needing more machine: more photo storage, a second server for reliability, encrypted connections with a purchased domain, or daily off-server backups. Each can be quoted when wanted.

Amazon Web Services list prices, Sydney region, October 2026, for the server size currently in use. Excludes application development and maintenance, billed separately.
